

# Maps on Way

My application name is map on way

This shows the required location.

For time constraints I have given a location .

## Results

This is the home page. It has title. This is a login page with username/Email and password credentials. The username and password are given initially.

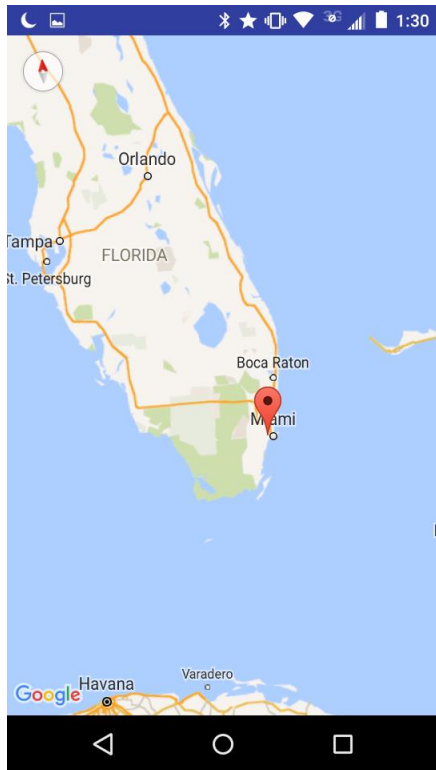

The username is Venkatagovardhan

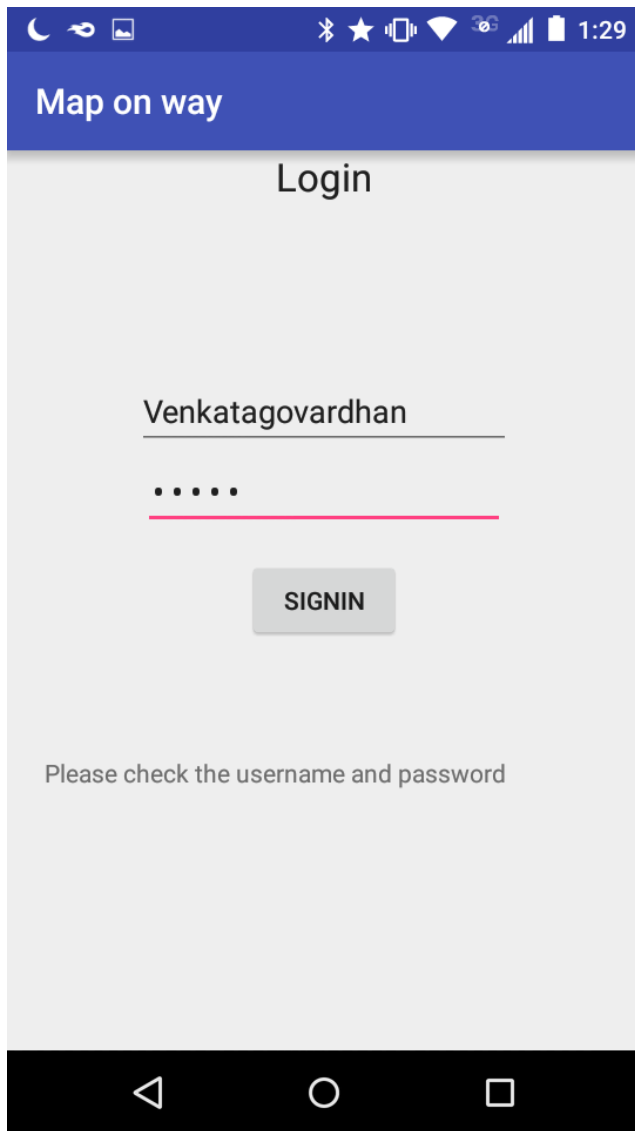

Password is Venkat

After login it will spot the location. The location details are given beforehand.

If we use the gestures we can zoom the location.

If we give the wrong credentials it will pop up the error notification.

This is my app. I debugged into my android device and the pictures are taken from my device.
